IN THE CLAIMS:

This listing of claims will replace all prior versions and listings of claims in the application:

1 (Withdrawn) An isolated peptide comprising the amino acid sequence QA(Q/E)GQLV or functional equivalents thereof, wherein said peptide selectively homes to TNF receptor(s) of the vasculature of a heart.

2.-17. (Cancelled)

18 (Withdrawn) An isolated peptide comprising the amino acid sequence ARRGOAV or functionally equivalent thereof, wherein said peptide preferentially homes to BDNF receptor(s) of the vasculature of a heart.

19.-32. (Cancelled)

(Withdrawn) An isolated peptide comprising the amino acid sequence G(R/W)RFIRV or 33. functional equivalent thereof, wherein said peptide preferentially homes to BDNF receptor(s) of the vasculature of a heart.

34.-51. (Cancelled)

52. (Withdrawn) A conjugate comprising a peptide according to claim 1 and a functional moiety, wherein said peptide selectively homes to TNF receptor(s) in the vasculature of a heart

53.-65. (Cancelled)

Applicants: Edelberg et al. Serial No.: 10/527,832

Page 3 of 10

 (Withdrawn) A conjugate comprising a peptide according to claim 18 and a functional moiety, wherein said peptide preferentially homes to BDNF receptor(s) of the vasculature of a heart.

67.-74. (Cancelled)

 (Withdrawn) A conjugate comprising a peptide according to claim 33 and a functional moiety, wherein said peptide preferentially homes to BDNF receptor(s) of the vasculature of a heart.

76.-85. (Cancelled)

- 86. (Withdrawn) A method for determining a young heart or young areas of a heart vasculature in a mammal comprising:
 - administering a peptide comprising the amino acid sequence QA(Q/E)GQLV or functionally equivalent modifications thereof, conjugated to a detectable marker, wherein said first peptide selectively homes to TNF receptor(s) in a vasculature of the heart; and
 - detecting the marker;

wherein a disproportionately high binding of QA(Q/E)GQLV is a young heart or young areas of a heart vasculature.

87.-91. (Cancelled)

- (Currently Amended) A method for determining a condition healthy versus damaged areas of a heart vasculature in a mammal comprising:
 - a) administering a first peptide comprising the amino acid sequence identified in SEQ ID NO: 1, said peptide conjugated to a first detectable marker,

Applicants: Edelberg et al. Serial No.: 10/527,832 Filed: September 19, 2005

Response to non-final Office Action

Page 4 of 10

wherein said first peptide selectively homes to TNF receptor(s) in the vasculature of the heart:

- administering a second peptide comprising the amino acid sequence identified in SEQ ID NO: 4, said peptide conjugated to a second detectable marker, wherein said peptide selectively homes to BDNF receptor(s) in a vasculature of the heart; and
- detecting the first and second marker;

wherein a ratio of binding of the first peptide to the second peptide of greater than two indicates an area of healthy heart vasculature and wherein a ratio of binding of the first peptide to the second peptide of less than two indicates an area of damaged heart vasculature.

93.-101. (Cancelled)

- 102. (Withdrawn) A method for determining the condition of a vasculature of a heart in a mammal comprising:
 - administering a first peptide comprising the amino acid sequence QA(Q/E)GQLV
 or functionally equivalent modifications thereof, conjugated to a first detectable
 marker, wherein said first peptide selectively homes to TNF receptor(s) in the
 vasculature of the heart;
 - administering a second peptide comprising the amino acid sequence ARRGQAV or G(R/W)RFIRV or functionally equivalent modifications thereof, conjugated to a second detectable marker, wherein said second peptide homes to BDNF receptor(s) in the vasculature of the heart; and
 - detecting the first and second marker;

wherein a disproportionately high ratio of binding of the first peptide to the second peptide indicates a young heart or young areas of the heart vasculature or wherein a Applicants: Edelberg et al. Serial No.: 10/527,832

Serial No.: 10/527,832 Filed: September 19, 2005

Response to non-final Office Action

Page 5 of 10

disproportionately low ratio of binding of the first peptide to the second peptide indicates an old heart or old areas of the heart vasculature.

103.-115. (Cancelled)

116. (Withdrawn) A method for delivering a functional moiety to a young heart vasculature in a mammal, the method comprising administering a conjugate of claim 52.

117.-126. (Cancelled)

127. (Previously Presented) A method for delivering a functional moiety to a heart having damaged vasculature in a mammal, the method comprising administering a conjugate, said conjugate comprising a peptide comprising the amino acid sequence identified in SEQ ID NO: 4 and said functional moiety, wherein said peptide preferentially homes to BDNF receptor(s) of the vasculature of a heart.

128.-138. (Cancelled)

- (Withdrawn) A method for discovering mimics of amino acid sequence QA(Q/E)GQLV or functionally equivalent modifications thereof, comprising:
 - a) determining a three-dimensional structure of said sequence;
 - b) identifying compounds comprising said structure; and
 - determining the capacity of said compounds for selective homing to TNF receptor(s) in a heart vasculature of a mammal;

wherein compounds which selectively home to TNF receptor(s) in the vasculature of the heart are mimics

140.-146. (Cancelled)

147. (Withdrawn) A method for discovering mimics of amino acid sequence ARRGQAV or

G(R/W)RFIRV or functionally equivalent modifications thereof, comprising:

determining a three-dimensional structure of said sequence;

b) identifying compounds comprising said structure; and

c) determining the capacity of said compounds for homing to BDNF receptor(s) in a

heart vasculature of a mammal;

wherein compounds which home to BDNF receptor(s) in the vasculature of the heart are

a mimics.

148.-156. (Cancelled)

157. (Withdrawn) A method for delivering a functional moiety to a old heart vasculature

in a mammal, the method comprising administering a conjugate of claim 75.

158 (Previously Presented) A method according to claim 92, wherein BDNF receptor is trktB

receptor.

59. (Previously Presented) A method according to claim 158, wherein the trkB receptor is

truncated trktB.

160. (Previously Presented) A method according to claim 92, wherein said vasculature is

microvasculature.

161. (Previously Presented) A method according to claim 127, wherein the BDNF receptor is

trkB receptor.

162. (Previously Presented) A method according to claim 161, wherein the trkB receptor is

truncated trkB.

163. (Previously Presented) A method according to claim 127, wherein said functional moiety is a therapeutic agent.

- 164. (Previously Presented) A method according to claim 163, wherein said therapeutic agent is estrogen.
- 165. (Previously Presented) A method according to claim 127, wherein said functional moiety is a detectable marker.
